

Vacancy
Product Developer/Solution Architect

JOB DESCRIPTION

We are currently seeking a Product Developer/Solution Architect to sell our products and services to the fast-expanding wireless industry.

Why Alpha Wireless?

Alpha Wireless is a young company, founded and with headquarters in Ballybrittas, Portlaoise, Ireland, on a mission to change the way wireless networks are built. As a known innovator, we are creating the next team of leaders in the wireless industry.

We are a global supplier

Alpha Wireless has grown quickly as a result of our customer-focused culture, with proven expertise in the areas of custom design and integration of wireless solutions. We are committed to helping clients succeed by creating solutions that make it easy to have a return on investment. Our talented and diverse team is industry-leading.

The wireless industry is set to yet again expand rapidly with the arrival of 5G, and the foundations of 4G, 3G, and 2G all needing antenna support. The importance of seeking out opportunity to drive innovation, cultivate insights and build unique solutions for our clients has never been greater. We take pride in our work, and our workforce, and believe in cultivating an atmosphere that supports success.

Job summary:

We are seeking a Product Developer/Solution Architect to facilitate and increase sales, and improve the technical understanding of our customers.

The successful candidate will work closely with our engineering team, solution consultants and customers. They will provide technical guidance and hands-on assistance where required. The successful candidate will have extensive experience in working with mobile operators and providing special coverage solutions.

Reporting directly to the Head of Product Development, this role is part of our expanding R&D and sales team, which is focused on providing coverage solutions to all the operators.

The Solution Architect will work directly with and alongside cross-functional teams in design problems, best practices and compliance. A deep understanding of radio coverage, antenna design and operator requirements is essential.

Qualifications:

- Bachelor's degree in Computer Science, Computer Engineering or related technical discipline
- At least five years' with or as part of a mobile operator based in EMEA

Experience:

- Familiar with 2G/3G/4G/5G standards and MIMO, as well as technical requirements for these technologies
- At least a year's experience in radio coverage roles, with experience in solution development
- Strong experience in providing special coverage solutions using antennas
- Experience with Agile and Scrum development processes
- Experience in providing solutions from concept through to delivery
- Excellent written and verbal communication skills
- Excellent collaboration, influence and leadership skills

Core behaviours:

- Positivity
- Teamwork
- Technical
- Dependability

More about Alpha Wireless

Wireless networks have changed the world. They connect us with people around the globe. They enable innovation and are making smart cities and the Internet of Things possible. Successful wireless networks are built on a foundation of high-performance antennas.

Alpha Wireless is looking for people who are interested in changing the way wireless networks are built. Our team works hard to understand the customer's end-to-end process. We don't just focus on antenna requirements. We believe that with the right people and processes, our team will continue to develop unique solutions that set the standard for quality, performance and aesthetic design.

The Alpha Wireless team is a team. We operate as a team. We win and lose as a team. We support each other. Are you a team player? Do you like a challenge? If so, you should try out for the team.
